Company: Microsoft Corporation

Role: Software Engineer

Location: Hyderabad, India

Work Mode: Hybrid

Experience: 0-2 years

Overview

Microsoft's Cloud + AI group in Hyderabad builds the services that power Azure and Microsoft 365 for millions of organizations worldwide. We are looking for a Software Engineer who loves building reliable services and shipping features to production.

Responsibilities

- Design, develop and test cloud microservices running on Azure using C#, Java or TypeScript.
- Build clean, object-oriented domain models that apply SOLID principles and common design patterns.
- Own features end to end: from design docs and code reviews to deployment through CI/CD pipelines.
- Write unit and integration tests and help maintain high code quality across the team.
- Build and consume RESTful APIs and work with relational databases such as Azure SQL.
- Collaborate with product managers and partner teams across time zones.

Qualifications

- Bachelor's degree in Computer Science or a related field.
- Strong coding skills in at least one object-oriented language such as C#, Java, C++ or Python.
- Good knowledge of data structures and algorithms and problem-solving skills.
- Understanding of SQL and relational database concepts.
- Familiarity with Git and agile development practices.

Preferred Qualifications

- Experience with Azure, Docker or Kubernetes.
- Knowledge of infrastructure as code with Terraform or Bicep.
- Exposure to distributed systems and scalability concerns.

About Microsoft

Microsoft's mission is to empower every person and every organization on the planet to achieve more. Benefits include health insurance, flexible work and learning opportunities.
