Company: Oracle Financial Services Software

Role: Associate Software Engineer

Location: Bengaluru / Mumbai, India

Work Mode: Onsite

Experience: Freshers (0-1 years)

Job Description

Oracle Financial Services Software builds core banking and financial technology products used by leading banks in more than 140 countries. As an Associate Software Engineer you will join a product team building mission-critical banking applications.

Key Responsibilities

- Develop and maintain enterprise Java components for financial transaction processing.
- Write and optimize Oracle SQL and PL/SQL queries, stored procedures and triggers, with attention to ACID transactional integrity.
- Apply object-oriented principles and design patterns to build maintainable modules.
- Write unit tests with JUnit and support integration testing across banking product modules.
- Debug issues reported by QA and customers and fix them within release timelines.
- Document your code and collaborate with team members in an agile environment.

Qualifications

- B.E./B.Tech or MCA in Computer Science, IT or a related branch with strong academic record.
- Proficiency in Core Java and object-oriented programming concepts.
- Good understanding of SQL and relational databases.
- Basic knowledge of data structures and algorithms.
- Basic understanding of Linux environments.
- Good communication skills and willingness to learn the banking domain.

Good to have

- Exposure to Spring Boot and REST web services.
- Knowledge of Git.

About Oracle Financial Services
