Company: Microsoft Corporation

Role: Data Analyst

Location: Hyderabad, India

Work Mode: Hybrid

Experience: 0-2 years

About the role

The Customer Success Analytics team turns business data into insight for Microsoft's cloud customer operations. As a Data Analyst you will help leaders understand what is happening in the business and why.

What you'll do

- Write advanced SQL queries, stored procedures and views to transform raw business data into reporting tables.
- Build and maintain Power BI dashboards and reports used by senior leadership for weekly business reviews.
- Investigate data discrepancies and work with engineering teams to protect data integrity across pipelines.
- Track key performance metrics and explain the drivers behind changes to business stakeholders.
- Automate recurring data cleaning tasks using Python.

What we're looking for

- Bachelor's degree in Analytics, Computer Science, Economics, Statistics or a related field.
- Strong proficiency in SQL and data modeling.
- Hands-on experience with Power BI or Tableau and Microsoft Excel.
- Introductory Python or R for data analysis.
- Strong analytical skills and attention to detail.
- Excellent written and verbal communication and presentation skills.

Nice to have

- Familiarity with Azure data services and data warehousing.
- Basic understanding of statistics and A/B testing.

About us

Microsoft is an equal opportunity employer. We offer hybrid work, health benefits and a culture of learning.
